

AI Memory Management System — Semantic Memory Example

Purpose

A small knowledge source for testing PDF ingestion into semantic memory and Neo4j.

User Profile

Name: Alex

Role: Software Engineer

Experience: Full-stack development

Technical Skills

- React and TypeScript for frontend applications
- Python and FastAPI for API services
- Java and Spring Boot for backend systems
- Neo4j for graph-based data and memory
- LangGraph for agent orchestration

Preferences

- Prefers practical, production-oriented examples
- Likes building AI agent systems
- Prefers remote software engineering opportunities

Goal

Build an AI agent with semantic, episodic, and procedural memory and graph-based retrieval.
